For
Apple Wireless Keyboard
Apple Keyboard (Wired) released 2009

A The ProTouch Advantage

The iSkin ProTouch keyboard protector is made from premium silicone and features built-in antimicrobial product protection to inhibit the growth of odor and stain causing bacteria on the product. It creates a barrier to help prevent dust, dirt and food spills from reaching the surface of your keyboard. It also helps prevent key wear, which can extend the life of your keyboard.

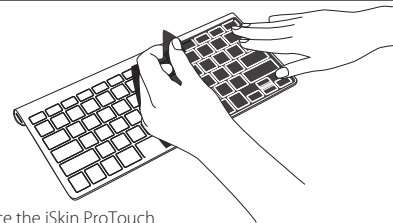

Unlike plastic keyboard protectors, the iSkin ProTouch's premium silicone is long-lasting and can be easily washed and reapplied as often as is necessary. It also diminishes loud keystroke sound, therefore making it ideal for low ambient noise environments such as home, office and academic.

1 Prepare Your Keyboard

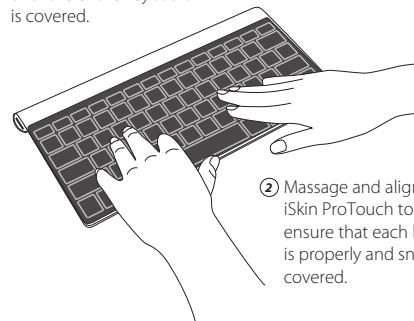

Before using the iSkin ProTouch keyboard protector, shutdown your computer and remove all surface oil and dirt from the keyboard using a soft, lint-free cloth. This will ensure a better fit for when the iSkin ProTouch is applied.

2 Overlaying the ProTouch Protector

1 Place the iSkin ProTouch keyboard protector over the keyboard. Start at one end and continue until the entire keyboard is covered.

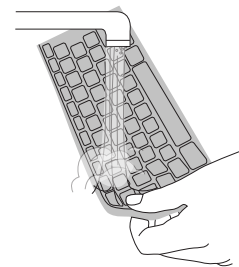

2 Massage and align the iSkin ProTouch to ensure that each key is properly and snugly covered.

Maintenance

The iSkin ProTouch keyboard protector is designed to capture finger oils, food particles and dirt that can accumulate over time. To remove built-up grime, we recommend that you remove, and then thoroughly wash the protector in warm water infused with mild dishwashing detergent. Regular washing may also help prevent the spread of germs.

▲ Dry thoroughly before reapplying the iSkin ProTouch to your keyboard.
